IFrame

An IFrame (Inline Frame) is an HTML element that allows one webpage to be displayed inside another webpage.

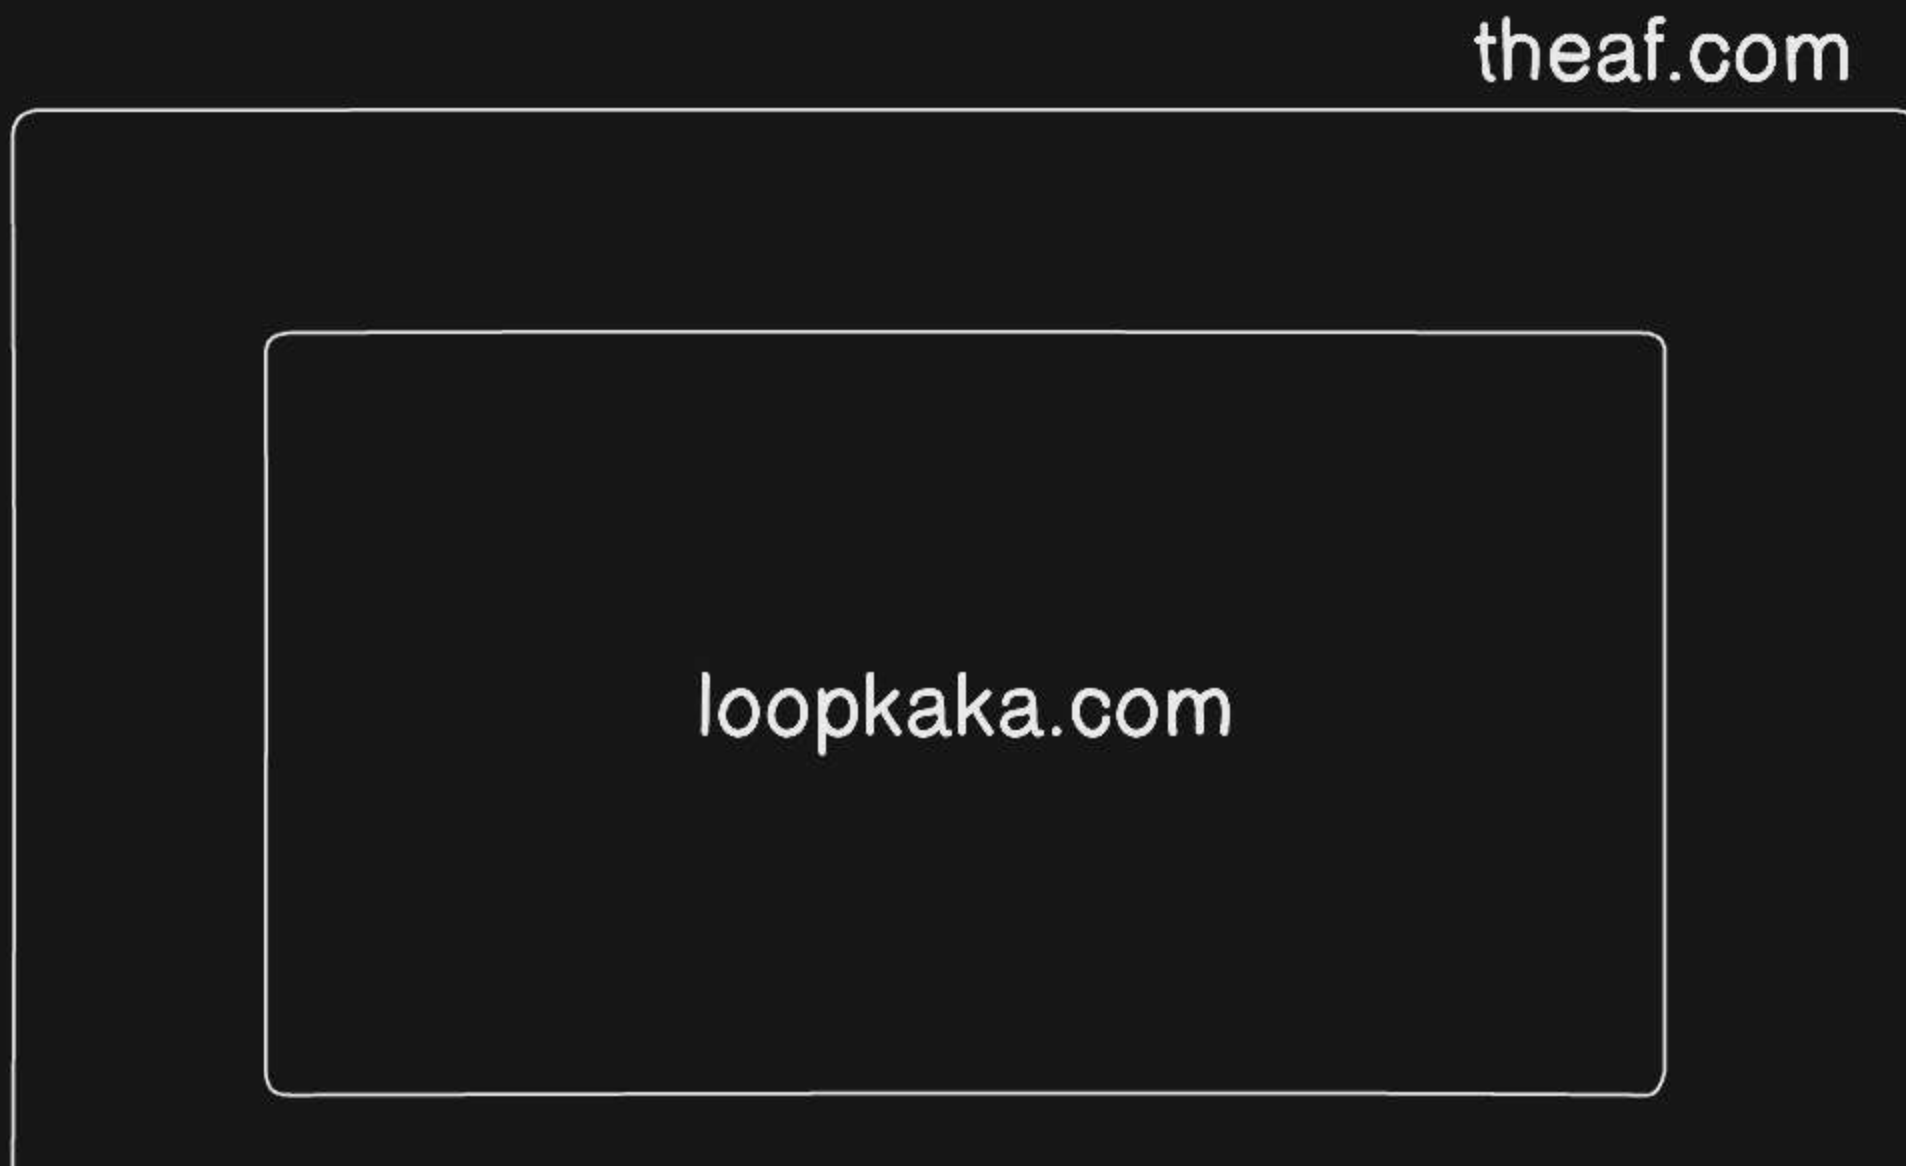

Clickjacking attack

Clickjacking is an attack where an attacker tricks a user into clicking on something different from what they think they are clicking.

Can IFrame steal data?

Browser protects users using Same-Origin Policy.

Morden browser are supporting same-origin by default so data can't steal from iFrame

X-Frame-Options

DENY - not allow any iframe

SAMEORIGIN - Allow iframe only for same origin

Older way to put security in header

Content-Security-policy(CSP) frame-ancestors

none is same as DENY

self is same as SAMEORIGIN

Sandbox
